Principles

💡   If you encounter any error, feel free to ⌾ enter an issue on GitHub.

Team will adhere to the following set of principles.

- As it is an example project, we follow the programming, motherfucker methodology.

- There should be no operationnal management cost, so

  - Application should be auto-redeployed

  - Application should be self-healing

- Application should use messaging and async systems as much as possible

- Interfaces between components should be documented
